

About Us

Founded in 2017, we have our roots in Odense, Northern Europe's largest high-tech hub and the home of Denmark's cluster for robotics, automation and drones – of which we are an active member.

Robotic welding has changed over the decades and we saw an opportunity to develop software to make it as easy as possible for welders to use cobots for automated welding.

With SmoothTool, you can put your welding robot to work without the need for complex programming and deliver a flawless result every time. Using the SmoothTool Programming Flange you can use the 'freedrive' (freehand) mode to show your robot how you want the job done, making this process a lot easier and faster.

Robotic welding made easy!

SMOOTHTOOL FEATURES

Offset Welding

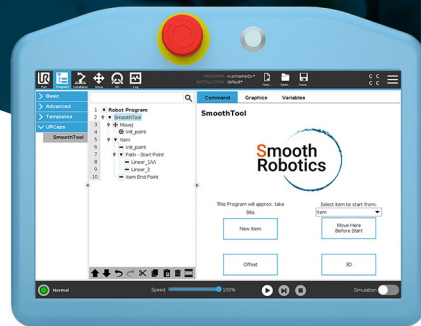

Stich Welding

3D Viewer

Linear and Circular weaving

Power Source Independent

Programming Flange

- User-friendly interface
- No-code programming
- Works with your preferred power source
- Achieve the perfect weld first time
- Quick and easy installation
